-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Election/Restrictions*

1. Although the applicant only has one month to respond to the application and does not have to address the following problems, they are pointed out in order to promote compact prosecution. Claim 6 appears to have 101 and 112 problems. It contains two (2) statutory classes (method and apparatus). See MPEP 2173.05(p). Section II.
2. Restriction to one of the following inventions is required under 35 U.S. C. 121:
  - I. Claim 1, drawn to a method for establishing optical links between transceiver nodes with the special technical feature of a map node corresponding to an uncertainty window in which the node scans the uncertainty window of a retro reflected signal in order to verify that a link has been achieved, classified in class 398, subclass 170.
  - II. Claims 5 and 8, drawn to the details of a turret task module with details of a transmit power control module, classified in class 398, subclass 120.
  - III. Claims 2-4 and 9-17, drawn to details of alignment between plural nodes, classified in class 398, subclass 129.
3. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such

as determining whether a link has been achieved without details of any alignment.

Invention II has details of a turret task module not required for inventions I and III. Invention III is drawn toward the method of aligning nodes not required for inventions I and II. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
